

PRODUCT BULLETIN

OIL TREATMENT

PRODUCT #814

CAM2 Oil Treatment reduces friction, extends engine life, and makes the engine runs smoother. It also reduces oil consumption and engine blow-by, keeping oil seals and gaskets supple. **CAM2 Oil Treatment** eliminates "cold-starts", cleans engine gum and varnish over a long period of time, and can be used in manual transmissions and rear ends to extend gear life.

CAM2 Oil Treatment uses a combination of advanced additive and base oil designed to help protect metal surfaces of your vehicle by providing a protective barrier against friction and heat generation which is important in today's hotter running, import and compact engines which tend to run at higher temperatures. **CAM2 Oil Treatment** helps maintain viscosity providing better oil film during engine operation and during start up when oil has not fully reached critical engine components.
